

Use IT Longer - Conserve resources

Collection and storage

Professional and secure

Transportation with our own fleet Individually tailored

For security reasons, we transport your IT equipment with legally sensitive data exclusively with our own fleet of vehicles. We already use electrically powered vans in the local area.

Collection and storage are individually tailored to your processes (e.g. roll-out, roll-back) and the lifecycle of the devices.

Monitored and insured

Every transport is GPS-monitored and tracked. Of course, every journey is also adequately insured.

Our own trained staff

Long-standing and experienced employees ensure that the goods are handled professionally and in compliance with the AWG. They are specialists in hardware assessment and handling and are specially trained in load securing. We also employ professional drivers.

Direct transfer

The goods are immediately transported to their destination within one day. Our trucks are therefore not left unsecured overnight in public parking lots. We transport your goods to the named disposal company or warehouse without interruption.

Professional packaging material

We provide reusable containers for every application, e.g. lockable aluminum boxes for data carriers.
