Use IT longer – Conserve ressources

Our commitment to ESG

We operate a sustainable business model and rely on renewable energy. We make IT equipment usable for longer and thus conserve resources. Our environmental measures are ISO 14001-certified.

Environment

RESOURCE UTILIZATION

Our core business is to make IT equipment usable for longer by reconditioning it, thereby conserving valuable resources. In this way, we promote a sustainable circular economy and a future worth living.

CLIMATE CHANGE

We reduce our CO2 emissions by using renewable energies. Thanks to our own PV system, we produce all the electricity required to erase data from IT devices ourselves.

ENERGY AUTARKY

WE HAVE BEEN GENERATING OUR OWN ENERGY REQUIREMENTS SINCE 2023 AND ARE AIMING FOR 100% ELECTRICITY SELF-SUFFICIENCY BY EXPANDING THE PV SYSTEM.

Social

EMPLOYER QUALITY

Our employees are the key to our success. That is why we promote a positive working environment, invest in training and development and focus on diversity and equal opportunities.

RESPONSIBLE TO THE CUSTOMER

We enable our customers to make environmentally conscious decisions and reduce their carbon footprint.

DATA SECURITY

The protection of customer data is our top priority. Our processes meet the highest quality and security standards and are certified in accordance with ISO 9001 and ISO 27001.

Governance

INTEGRITY AND ETHICS

We are committed to ethical behavior and transparent corporate governance. We have clear behavioral guidelines and promote fair business practices.

SUSTAINABLE BUSINESS MODEL

Our successful business model is based on long-term success by integrating environmental and social responsibility, for example through the reuse of IT equipment and sustainable procurement practices.

INNOVATION

We invest in progressive technologies and focus on innovative change in order to develop future-proof solutions and continuously improve our processes.
